

The 3 most important foods for a rabbit are hay, hay, and HAY! Contrary to popular belief, rabbits do not need salt licks, vitamins, or hard wooden objects to wear their teeth down. Teeth are kept worn to a proper length by the silicate and lignin content of grass and grass hays. Do not offer rabbits plants, vegetation, or tree branches unless you are sure they are not harmful.

Limited pellets (plain only. no seeds, nuts, colored tidbits): 1/4 cup, per 5 lb. of body weight per day or according to your individual rabbit, this is just a general amount.

Dark -green leafy veggies daily if possible. Good veggies: all leaf lettuces, dandelion greens, kale, collards, turnip greens, mustard greens, parsley, cilantro, basil, Avoid: cabbage, broccoli, cauliflower, brussel sprouts, spinach as well as anything that give humans gas as rabbits can not expel gas and it can be fatal.

Limited amounts of sweet veggies such as carrots.

Occasional treats in very low quantities: slice of apple, slice of banana, a -few, hulled sunflower seeds, 2-inch piece of carrot. For more frequent treats, use fragrant herbs such as cilantro, parsley, arugula, basil, et al. Do not feed bread or-other high-carbohydrate foods, as they can lead to intestinal dysbiosis.

Fresh water. Double check to see that nozzle in the bottle is working properly. A bowl encourages more drinking, but the bowl must be heavy crock or secured to the side of the pen to prevent tipping.
